

Peer review 2

List the main points made in the draft, in order that they are presented in the paper.

The title of the paper is called project draft but in the header it lists what the draft is supposed to contain. The main point of the paper is that there is a need for an application containing a system that allows for students to trade books for other books students have previously used to eliminate some of the cost of textbooks. The reason being that textbooks are very expensive and of extreme importance to have. Though some Students have made it to college some classes require a large amount of textbooks and some students have to take the same classes next semester so why not just share them or trade them with other students. I think that the process in which the application will be made needs more support like which programming language will be used, which platform will the application be on (Apple or android) and just a more concrete example of the testing and creation of the application. The main points of the paper are in good order i feel as though you gave value to your idea and i myself as a senior would have loved to have a system like this throughout my college career. The references you have are spot on in the sense that they are similar systems but again I am confused as if this is going to be an online situation or phone application or a in store sort of program. The references are not mentioned in the paper but they allow for proof that the idea of a trading system is logical and can provide results. The paper is not overly packed with information that a non technical person would not understand i feel as though if the same simplicity is integrated into the application itself the idea will gain weight and allow for it to benefit not just marymount students but other universities

as well. The 13 pages all contain an essential part the projects information. In conclusion the paper is coming together well. The project is to basically create a system to save students money on books by using a trading system. This is a great idea it just needs more meat and potatoes to bring it to life to me the paper seemed more like a concept in the works and with real life examples. This project has a lot of potential i wish i could have thought of this.
