

Title

1. The title page is missing; the front page is dull and could use some editing.

Main Points

1. The main points made in the draft are the overall objective of the project which is the development of a gaming app using code on swift. The paper starts off discussing Apple and how they revolutionized the mobile application industry which I found interesting. There was background on apple as well which was well organized and detailed. The project plan seems adequate and well detailed. The risk factors included some good examples.
2. There are a few main points that need support and a bit more detail. In resources it's a bit too short with just a few sentences. Add some information on what xcode is, how it works things of that nature. The project details had a good start as well but need a bit more information. In the knowledge being applied what did you learn in particular in those web development classes that made this whole project easier for you. If you elaborate a little bit more would make it better.
3. I think all the main points contributed to the overall theme of the paper.
4. The main point seems in order and would not reorder the paper.

Citations

1. There at least 10 references in the work cited page.
2. Not all of the references are cited in the paper at least once.

3. APA style in text citations is not consistent throughout the paper.

Final Thoughts

1. The whole objective of this paper and thesis is the development of a mobile gaming app using Xcode on apple's platform. The game will be directly for iPhone users only. Objective C and swift will be used to design the application as well.
2. After going through this paper I feel that it is well detailed, the thesis is well supported with evidences throughout the paper.
3. I think the only information missing is what exactly xcode, swift, and objective-C are. A little more information would suit the reader well as they are not of common knowledge.
4. I think the most important thing that was said in the paper explaining mobile applications, how Apple truly changed the mobile application industry with the first iPhone.
