

Peer Review

The topic for this Capstone Project seems very interesting. It seems like you have more than one thesis or concept you want to prove, which I think will make it easier for you to find content for your paper. Having questions to answer is a really good idea, because it will help you form a thesis, but I don't think that should be your thesis. It should be clear, concise and easy to understand. If you don't have a clearly defined thesis, your research paper will lack focus. Maybe your thesis should be what you hypothesize about how technology and the brain are connected - the ideas you "assumed" in your fourth paragraph.

At the moment, I'm not exactly clear on what your thesis is and what you're trying to prove and how you plan to prove it. For example, you mentioned that you're going to gather statistical data; but how? And what will this data be about/tell us?

You provided a lot of good background information about ADD/ADHD, but it would have been nice to see some more examples of why you believe that technology has an effect on the brain. More examples would have made you seem more credible and made me believe that it really is possible that there is a connection.

Your topic seems very feasible in one semester. The only thing that I believe will be really difficult is interviewing a neurologist and a psychologist, unless you happen to know someone already. The reason I say this is because, it may take a while to find a professional who is willing and has the time to be interviewed.

I definitely believe you will be able to complete your research by the end of this semester after you come up with a clear thesis and decide on the neurologist and psychologist you plan to interview.

Good luck!
