

## Peer review

### 1) Background material.

Is very evident in the first paragraph. It is very well explained topic. I would add a few things such as the university you are attending because a reader outside of Marymount will be confused as to where the class was taken. I would take out "I believe that I would come to the conclusion that The United States along with a few other are far in advance in both areas." Since it is already apparent that the US with other countries are already past almost ever other country. Also some grammatical errors, other than those few fixes I think it is a very well thought-out topic.

### 2) Is this topic feasible in one semester?

Yes I believe that this topic can be done within one semester. It has a lot of different information to help talk about this topic.

### 3) Is the Thesis clear?

Yes this thesis is clear. Measure the different means of connectivity and standards in the world. I will explore which internet provider have facility outside the United States and check if they provide the same service and meet the same standards.

### 4)Flowing text.

The text flows fairly well their are a few grammatical errors. I think this will be a very educational paper and should be a good read.
