

## **Title**

1. This paper actually does not have a title at all. There is a heading at the top left hand corner. Next, this person has “Marymount University” center on what would be the title page. However, there is no indication as to what this paper will be on.

## **Main Points**

1. Main points as to why RFID is better for security in comparison to barcodes.
  - A) RFID in Passports – This security is used to help prevent passports from being stolen and used by wrongful individuals.
  - B) RFID in the Military – RFID based weapons tracking allows tight security measures for the military and other law enforcements. Reason being is for a level-by-level clearance for obtaining certain weapons.
  - C) RFID in Credit Cards – Credit Cards have started to adopt RFID chips which would run a random number generator after each transaction. This makes it extremely hard for a thief to steal your identity,
  - D) RFID in Pharmacy – RFID makes it so it is extremely hard to create counterfeit pharmaceuticals. Companies are able to track their goods directly through distributors.
  - E) RFID in Imports – RFID is used when shipment containers are traveling overseas. This makes legal goods travel faster through customs. As well as illegal goods not able to make it through security cracks.
2. I believe that you could probably use more evidence or information under the “RFID in Passports” section. The reason I say that is because this section had one paragraph in comparison to the other sections that may have two to four paragraphs.
3. I think each section actually serves its purpose to the main point. The paper is trying to convince the reader why RFID should be widely adopted. Each section talks about the security measures and how it enhances it.
4. I don’t think they are out of order.

## **Citations**

1. Yes, there are 10 cited sources
2. Yes, each reference is at least once in the paper
3. Yes, APA style is used with in-text citations and references

## **Wording and Formatting**

1. Every technical jargon that is used you know exactly what it is by the next two sentences. There was not a lot of technical jargon used in this paper.
2. I believe a novice in the technical field would be able to read this paper with ease.
3. The entire paper from front to back is 11 pages. From the first paragraph to the end it is nine pages long.
4. The sections and headings are appropriate for the content within them.

### **Final Thoughts**

1. The thesis of this paper is that even though RFID may cost more per unit in comparison to barcodes, RFID should be widely adopted throughout retail stores and super markets. With adopting RFID one will be able to keep a tighter track on the in store goods better than ever.
2. Yes, I believe the thesis is supported strongly. There are five sections explained how they use RFID and how it has benefitted them.
3. I would say just make sure there are not any more cons to using RFID other than economic cost. Besides that I don't believe there is any other information missing.
4. I believe the most important thing said in this paper was the thesis statement. The thesis statement sets the tone of the paper and lets the reader know exactly what it will cover and what to look for.
