The topic of this paper sounds very interesting but in my opinion was focused heavily too much with the history of how the Internet came to be. Instead of dedicating a whole page of the history of Internet I think you should limit it to a paragraph and maybe mention the history of censorship since that's the main topic you will be discussing. As the first two pages of your paper I think it should focus more on what or how you're going to be conducting this research and save the more factual information for later when you prove your points. I think letting the audience know where you stand on the issue and why would be beneficial and can direct the rest of your paper and will keep the readers engaged in finding out the end results. I'd suggest listing some questions you might've asked yourself to give the audience a chance to tap into your mind. For example: *Will hackers be less of an issue if our Internet is censored? Has Internet censorship worked in China and what were their results?* Questions like this not only get your reader interested but also get you thinking of what you should be researching.

It is my opinion that this topic is feasible in one semester. There is a lot of background information about this online. Also there are other countries that have adopted this policy that you could learn from.

The thesis was fairly clear but I think should have been stated a little bit earlier into the paper. What I got out of the paper was that the writer wanted to prove whether Internet censorship could provide a safe platform for users. With personal identifiable information constantly at risk with hackers the writer believes

censoring the Internet can save people form having their information hacked, exposed, or published.

For the most part the paper flowed logically. My suggestion for a better flow would be to cut out the history lesson on the Internet and to focus on some introductory background on censorship and security since those are your two main topics. Also something you can add to your list of how you're going to conduct this project could be gathering some statistics on countries with censorship and countries without censorship. It might shed some light on whether it works or not from a security point of view.
